# Using the GCSS-Army Learning Portal

This learning portal is a *Single Lesson Learning Portal*. This means that it contains a single, specific lesson and its related materials for you to review. All GCSS-Army Learning portals operate the same way:

The left side of the learning portal displays a folder structure:

- The **Lesson** folder contains the actual learning simulation – clicking the SIM title opens options on the right side of the window (play the Training or view/download documents)

- The **Lesson SIMs** folder (and other folders with various titles) contain supporting simulations and documentation related to the lesson.

The right side of the learning portal always displays links and available documents related to the object selected on the left side of the portal:

- Click any link in the **Simulations** section to launch the related learning object.

- Click any document link in the **Printable Documents** section to open and view (or download) the related document.
