

Formula Information Sheet

Excel Formula Operators	Symbol	Order	Operator Precedence
Addition	+	1	Exponential / Exponentiation
Subtraction	-	2	Multiplication
Multiplication	*	2	Division
Division	/	3	Addition
Concatenation (joining in text formulas)	&	3	Subtraction
Exponentiation	^	4	Concatenation
Logical Comparison (Equal To)	=	5	Equal to
Logical Comparison (Greater Than)	>	5	Less Than
Logical Comparison (Less Than)	<	5	Great Than
Logical Comparison (Greater Than or Equal To)	>=		
Logical Comparison (Less Than or Equal To)	<=		
Logical Comparison (Not Equal To)	<>		

Developing a Formula

Simple Formula

Example: = B4 * G4 or = B7 + G8 + J10

Creating a simple formula will most commonly include one operator. Because of this one operator, the order of precedence does not apply to these sort of formulas.

Formula Using Parenthesis

Example: = (C7 + J7) / K23

Creating a formula with more than one operator may require parenthesis. These parenthesis should go around the part of the equation that you want completed first. In this example, using the order of precedence, the division would be completed before the addition. Therefore, to add C7 & J7 first, parenthesis must be used.

Nested Parenthesis

Example: = ((C4 + H9) * K10) / (C2 + D8)

Nested Parenthesis are parenthesis that are used inside another set of parenthesis. The important concept to remember is that when you open a parenthesis, it must close somewhere in the formula. The Nested Parenthesis will assist in allowing you to dictate what operators will be answered 1st, 2nd, 3rd, and so on. In the example above, the multiplication would have been completed first, then the division and addition. In our formula, the addition needed to be completed first, then the multiplication and finally the division. Parenthesis allowed us to re-order the order of precedence.

Excel Parenthesis Help

Excel will assist with Parenthesis by displaying each pair of parenthesis in different colors. This will be displayed in the formula bar and can assist with catching errors in your parenthesis.
